<b>Public Comment Field</b> <p>The revised DRAFT Rules and Regulations don't provide for a mechanism to credit container nurseries for their water recycling systems. Most container nurseries are able to capture all of their irrigation run off thru a system of drains and pumps. This water is then mixed with fresh water and stored in above ground reservoirs. The regulations also don't credit these users with the ground water recharge from the recycling water storage reservoirs.</p> <p>Thank You</p>
